PS Claim 56; Page 141-142; 218pp; English.
XX
CC The present invention relates to human kinases (PKIN) and polynucleotides
CC encoding such proteins. PKIN sequences of the invention are useful for
CC diagnosing, treating or preventing disorders associated with aberrant
CC expression of PKIN, particularly immune system disorders (e.g. acquired
CC immune deficiency syndrome (AIDS), thymic hypoplasia, Crohn's disease,
CC anaemia, asthma), neurological disorders (e.g. epilepsy, Charcot-Marie-
CC Tooth disease or seizures), cell proliferative disorders (e.g. cancers
CC such as adenocarcinoma, leukaemia, lymphoma, melanoma, myeloma, sarcoma),
CC and developmental disorders (e.g. Down's syndrome). They are also used
CC in gene therapy and protein therapy. The present sequence is human
CC PKIN-1 protein.

XX
PT Human kinase protein and polynucleotides encoding them, useful for
PT identifying modulators of kinase polypeptides and for treating,
PT preventing, and/or diagnosing neurodegenerative diseases and cancer -
XX
PS Claim 1; Figure 2; 65pp; English.
XX
CC This sequence represents a human protein kinase N of the invention.
CC The invention comprises nucleotide and protein sequences of an isolated
CC protein which is related to the PKN kinase subfamily. The protein
CC kinase N gene is located on chromosome 16. The protein may have
CC cytostatic and neuroprotective and can be used in gene therapy
CC possibly as a human kinase protein expression or activity modulator.
CC The nucleic acids and polypeptides of the invention may be used in the
CC prevention, diagnosis and treatment of diseases associated with
CC inappropriate kinase expression. The nucleic acids (or vectors
CC containing them) and the kinase may be used to treat disorders
CC associated with decreased expression, either by rectifying mutations or
CC deletions in a patient's genome that affect the activity of the enzyme
CC by expressing inactive proteins or to supplement the patients own
CC production of kinases. Additionally, the nucleic acids may be used to
CC produce the kinase, by inserting the nucleic acids into a host cell and
CC culturing the cell to express the protein. The nucleic acid and its
CC complementary sequences may also be used as DNA probes in diagnostic
CC assays to detect and quantitate the presence similar nucleic acids in
CC samples, and therefore which patients may be in need of restorative
CC therapy. The polypeptides may also be used as antigens in the
CC production of antibodies against the kinase and in assays to identify
CC modulators of kinase expression and activity. The anti-kinase
CC antibodies and antagonists may also be used to down regulate expression
CC and activity. The anti-kinase antibodies may also be used as diagnostic
CC agents for detecting the presence of kinase polypeptides in samples
CC (e.g. by enzyme linked immunosorbant assay (ELISA)). Disorders that may
CC be prevented, diagnosed and/or treated by the above methods include, for
CC example neurodegenerative diseases, inflammation, arteriosclerosis
CC psoriasis, cancer, papilloma virus infection, Alzheimer's disease
CC and growth disorders.

PT Nucleic acids encoding human kinase polypeptides, useful for preventing
PT diagnosing and/or treating e.g. cancer, immune, cardiovascular and
PT neuronal-associated diseases, and microbial infections -
XX
PS Claim 7; Figure 2; 433pp; English.
XX
CC AAU03501-AAU03557 represent novel human protein kinases #1-57. The
CC novel protein kinases have been identified as members of the tyrosine
CC or serine/threonine kinase (PTK and STK) families. The polynucleotides
CC encoding protein kinases and the polypeptides may be used in the
CC prevention, diagnosis and treatment of diseases associated with
CC inappropriate kinase expression. For example, they may be used to treat
CC cancers (especially cancers of haematopoietic origin), cardiovascular
CC disease (e.g. atherosclerosis), metabolic disorders (e.g. diabetes),
CC immune related diseases (e.g. rheumatoid arthritis), neurological
CC disorders (e.g. schizophrenia), neurodegenerative disorders (e.g.
CC Parkinson's disease), inflammatory disorders (e.g. asthma), infectious
CC disease (e.g. HIV) and reproductive disorders (e.g. infertility).
